- 15 gallon tank capacity
- Up to 80 psi water pressure
- Rolls on pneumatic tires
- Easily drained for transport
- Small compressor required for air operated models (1 hp 4 gallon tank is typical)
- No limitation on hose length from air operated pumps to compressor
- Electric model simply plugs into an electrical outlet

Drywall Tool Wash Stations

Apla-Tech, Inc.

There's no need to worry about where or how to clean your tools onsite anymore. Apla-Tech offers three 15 gallon wash stations for all your tool cleaning needs. To use, simply attach the airline from your compressor to your pump, or plug your pump into an electrical outlet. Pour about 5 gallons of water into the tank. Attach the wash hose and spray your tools clean. After cleaning, cycle dirty water into a bucket for disposal. Wash stations move easily around the jobsite.

Electric Wash Station

- Plugs into electrical outlet
- Drain plug for emptying tank
- Wash grate keeps tools out of water
- Screen filters unwanted debris

Tool Wash Tech 15-G
